

MARCIS

marine spatial planning and
cumulative impacts of blue
growth on seabirds

Nytt verktøy for marin arealplanlegging

Frank Hanssen

Nina Dehnhard

Norsk institutt for naturforskning

SEAPOP Seminar 9 – Asker 25.-26.9.2024

Kort presentasjon av team og samarbeidspartnere

Frank Hanssen

- Kjernekompetanse på utvikling av verktøy for arealplanlegging og beslutningsstøtte

Nina Dehnhard

- Kjernekompetanse på romlig habitatbruk og føringøkologi

SEAPOP Seminar 9 – Asker 25.-26.9.2024

Innhold

- Kort om MARCIS-prosjektet
- Metodikk og metodevalg
- Litt om teknologivalg og funksjonalitet
- Videre utvikling
- Hva kan MARCIS- verktøyet (og lignende verktøy) bidra til?

Kort om MARCIS- prosjektet

- Industrialiseringen av våre kyst- og havområder har ført til økt press på marint biologisk mangfold.
- Sjøfugler spiller en viktig rolle i marine økosystemer og er blant de mest truede fuglene i verden, delvis på grunn av menneskelig aktivitet.
- Det er et akutt behov for nye forvaltningsverktøy for å sikre bærekraftig industriell utvikling i det marine miljøet.

Prosjektets mål

- Utvikle rammeverk for å vurdere kumulative effekter av marin arealbruk på sjøfugl og trekkfugl
- Vurdere antropogene så vel som klimatiske effekter på sjøfugl
- Utvikle et nettbasert verktøy for marin arealplanlegging

Avgrensning

- Med unntak av noen scenarier, vil MARCIS-verktøyet være basert på nåværende utbygging/aktivitet og kan derfor uten tilpasning ikke brukes til å vurdere ny industriell aktivitet som f.eks. nye havvindprosjekter.
- Verktøyets hovedfokus er perioden utenom hekkesesong, men brukeren kan analysere månedlige overlapp mellom sjøfugl og menneskelig aktivitet gjennom hele året.

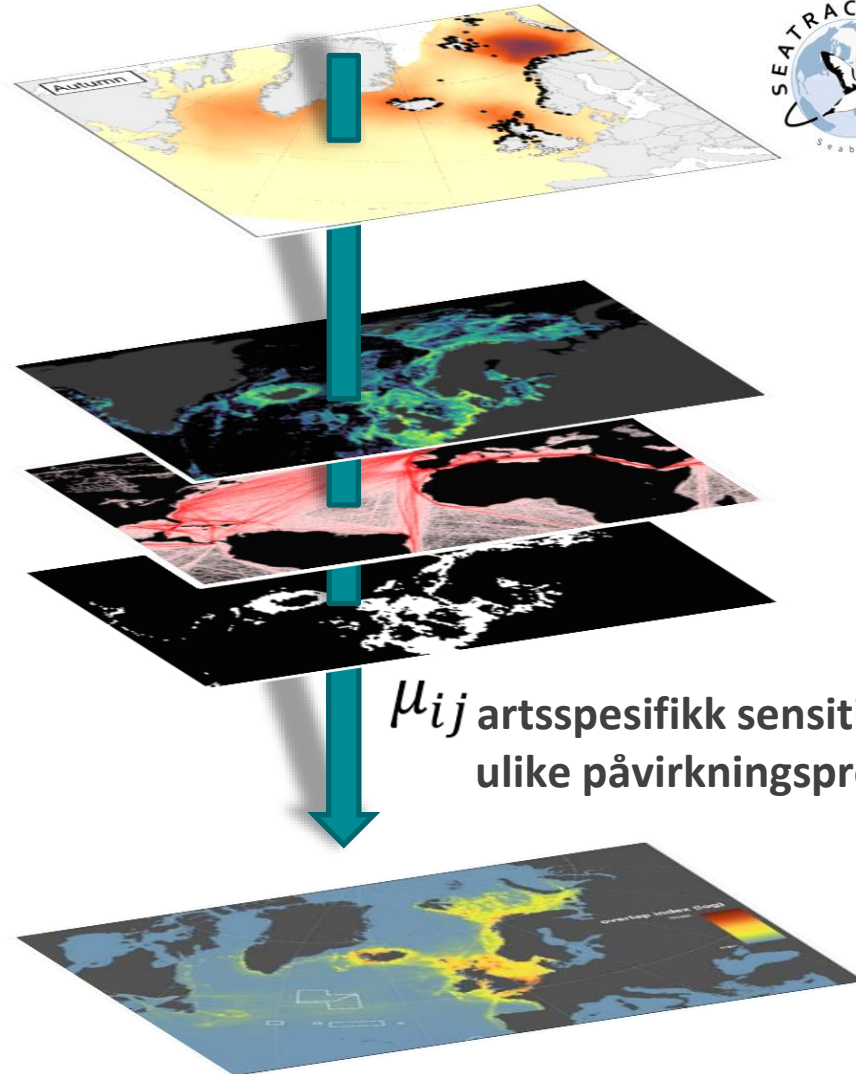

Metodikk for beregning av kumulativ påvirkning

E_j Sjøfuglers arealbruk

- Polarlomvi, lomvi, krykkje, lunde, alkekonge og havhest

P_i Påvirkningsprosesser

- Klimaendringer
- Fiskeri konkurranse
- Fiskeri bifangst
- Havvind
- Skipsfart
- Olje og gassutvinning

MARCIS tool

$$I(x, y) = \sum_{i=1}^n \sum_{j=1}^m P_i * E_j * \mu_{ij}$$

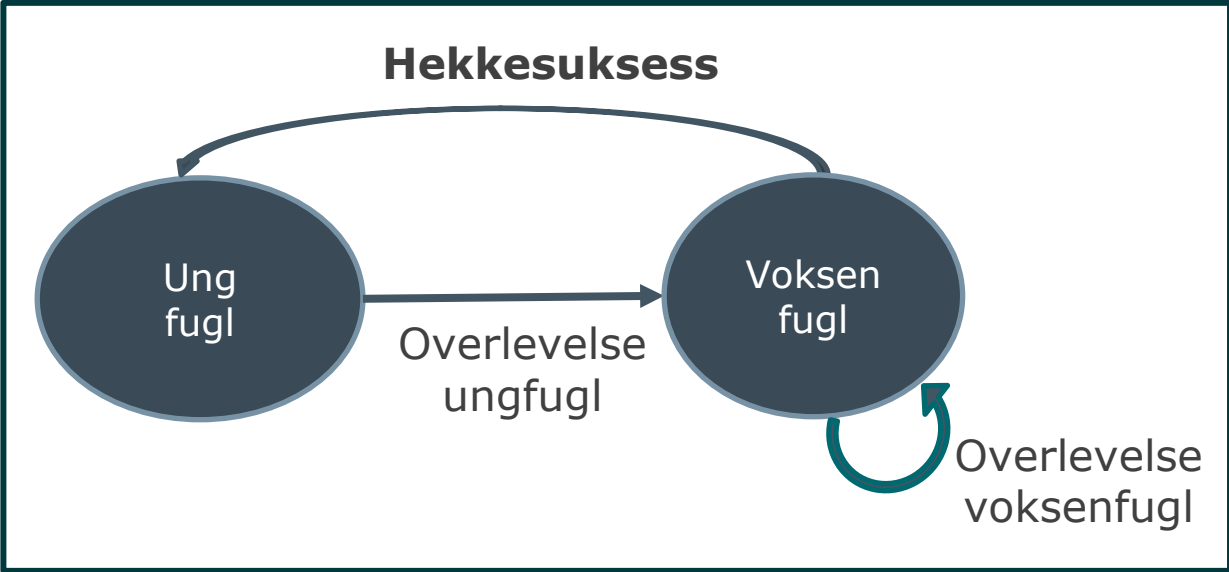

Halpern (Science, 2008) *A global map of human impact on marine ecosystems*

$I(x, y)$ Kumulativ påvirkning

Artsspesifikk sensitivitet (μ)

Prosesser gjennom hele året: Klimaendringer, havvind, konkurranse med fiskeri, skipsfart(?)

Påvirkningseffekt på hekkesuksess

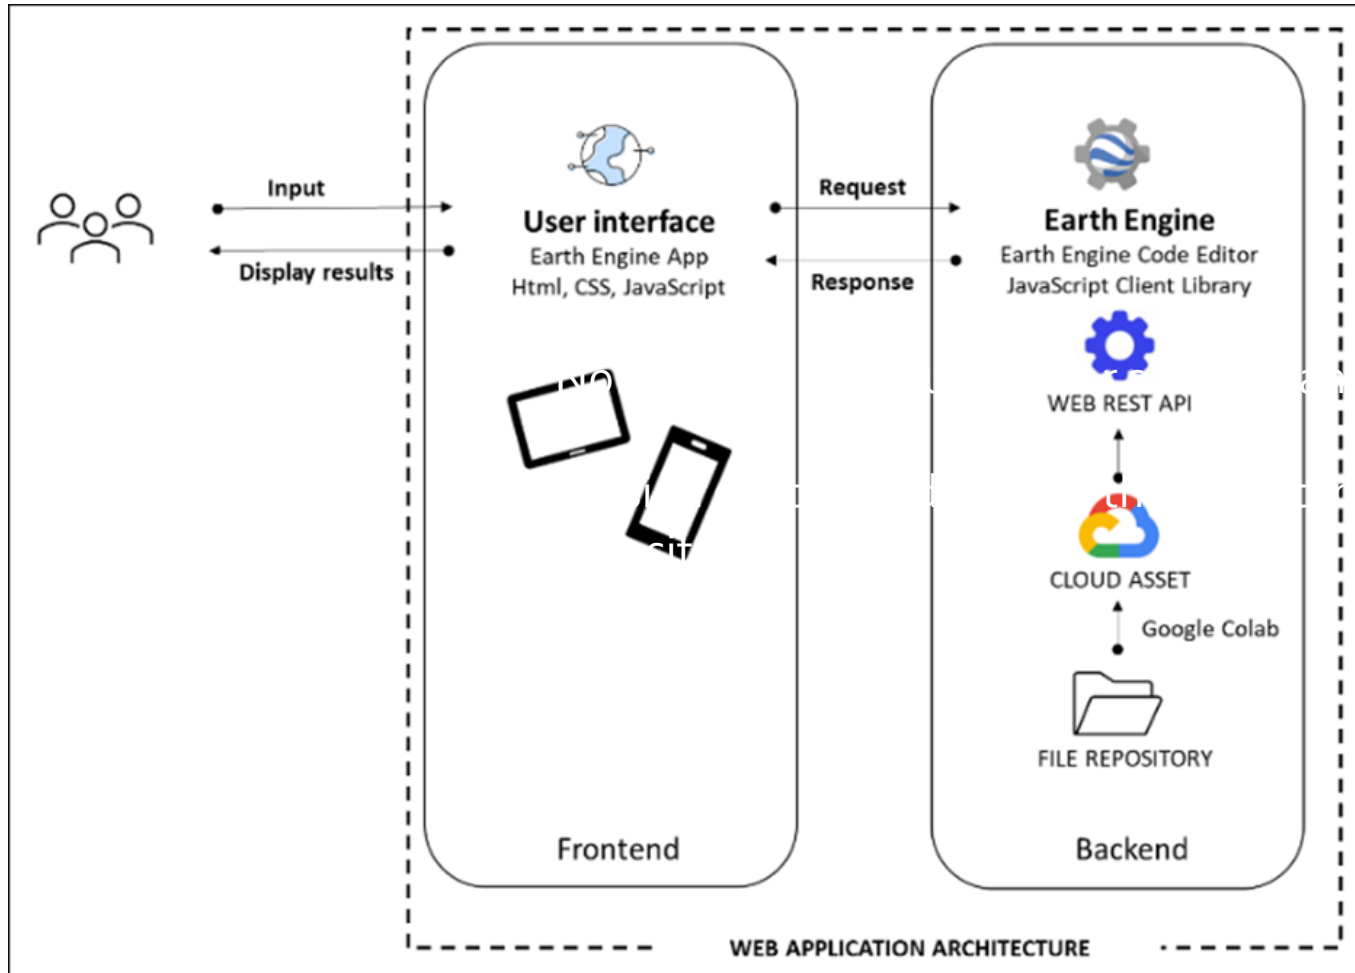

Samlet effekt på populasjonsveksten

Prosesser utenfor hekkesesongen: Klimaendringer, havvind, konkurranse med fiskeri, bifangst, olje og gass, skipsfart(?)

Påvirkningseffekt på voksenoverlevelse

Google Earth Engine

- Skybasert platform for tungregning, analyse og visualisering av stordata
- Programmerbare API
- Designet for miljøforskning, romlige analyser og tolking av endringer på jorden

- Søkefilter
 - Art, land, region, koloni, sesong, stressor
- Automatisk reskalering av valgte sjøfugl- og påvirkningskart
- Beregninger
 - Kumulativ påvirkning for valgt art i fht. alle påvirkningsfaktorer
 - Månedlig overlap mellom valgt art og en enkelt påvirkningsfaktor
- Statistikk
- Nedlasting av kart, statistikk og diagrammer

Videre utvikling (frem mot Februar 2025)

- Grensesnittet
- Oppdatere kartgrunnlaget
 - Nye distribusjonskart for sjøfugl
 - Komplettere påvirkningskart (petroleum, bifangst og konkurranse med fiskeri)
 - Aggregering av arts- og sesongmessige distribusjonskart (alle kolonier internasjonalt, nasjonale kolonier, regionale kolonier)
- Visualisere livsløpsanalyser for trekkfugl
- Statistisk funksjonalitet

Development of a Cumulative Impact Assessment tool for birds in Norwegian Offshore Waters: Trollvind OWF as a case study

Kate Layton-Matthews, Lila Buckingham, Emma Jane Critchley, Anna L.K. Nilsson, Victoria M. S. Ollus, Manuel Ballesteros, Signe Christensen-Dalsgaard, Nina Dehnhard, Per Fauchald, Frank Hanssen, Morten Helberg, Elizabeth Masden, Roel F. May, Hanno Sandvik, Amaud Tarroux, Tone K. Reiertsen

MARCIS kan bidra til

- Helhetlig forståelse av hvordan vi påvirker det marine økosystemet
- Bærekraftige beslutningsprosesser
- Konfliktreduksjon og dialog
- En mer adaptiv forvaltning
- Vern av økosystemtjenester
- Bedre involvering av interessenter
- Identifisere risikoreduserende tiltak
- Bedre etterlevelse av regelverk
- Integrasjon av klimaeffekter i planlegging og forvaltning av våre havområder

Takk for oppmerksomheten!
